I understand that penalties may be imposed if this assessment is in breach of the Academic Integrity and Misconduct policy.

Signature: _____ Date: 29-04-2026

Please note: Learners **MUST** retain a hard/soft copy of all assignments and must have the lecturer/member of Faculty acknowledge/sign as proof of submission.

Project Overview

This project includes a React.js single-page application (safestay-react/) developed for WT Assignment 3. The client runs on Vite and uses React Router for navigation.

The SafeStay SPA provides a responsive interface for browsing student accommodation listings, registering and logging in, creating and managing listings, saving favourites, and messaging between students and owners. The app uses a shared layout, client-side validation, context-based state, and custom CSS for a modern UI.

Frontend Features Implemented

Home Page
• Responsive hero-style layout
• Navigation links
• Shared layout navigation

Listings
• Listings route with property cards
• Client-side filtering
• Individual listing pages

Listing Detail
• Dynamic listing pages
• Property details and images
• Chat and favourites links

Create Listing / My Listings
• Create listing form
• Owner listing management
• Role-aware UI

Favourites
• Save favourite properties
• Toggle favourite state

Chat
• Chat threads and conversations
• Mock/API mode support

Login / Register
• Login and Register forms
• Client-side validation
• Error handling

Layout & Global UX
• Shared layout and navigation

• 404 handling
• Responsive typography and spacing

Technologies Used
• React.js
• JavaScript
• HTML5
• CSS3
• React Router
• Vite
• Node/Express API integration
• Render.com

Team Contributions

• Briyon Benny (3144036):
Listings pages, listing behaviour, owner/student UI, documentation..

• Joyal Joy (3147134):
Login/Register views, validation, authentication integration.

• Ayo-oluwa Joshua Olajide (3139178):
Layout, favourites/chat UI, API helpers, deployment notes, integration testing
